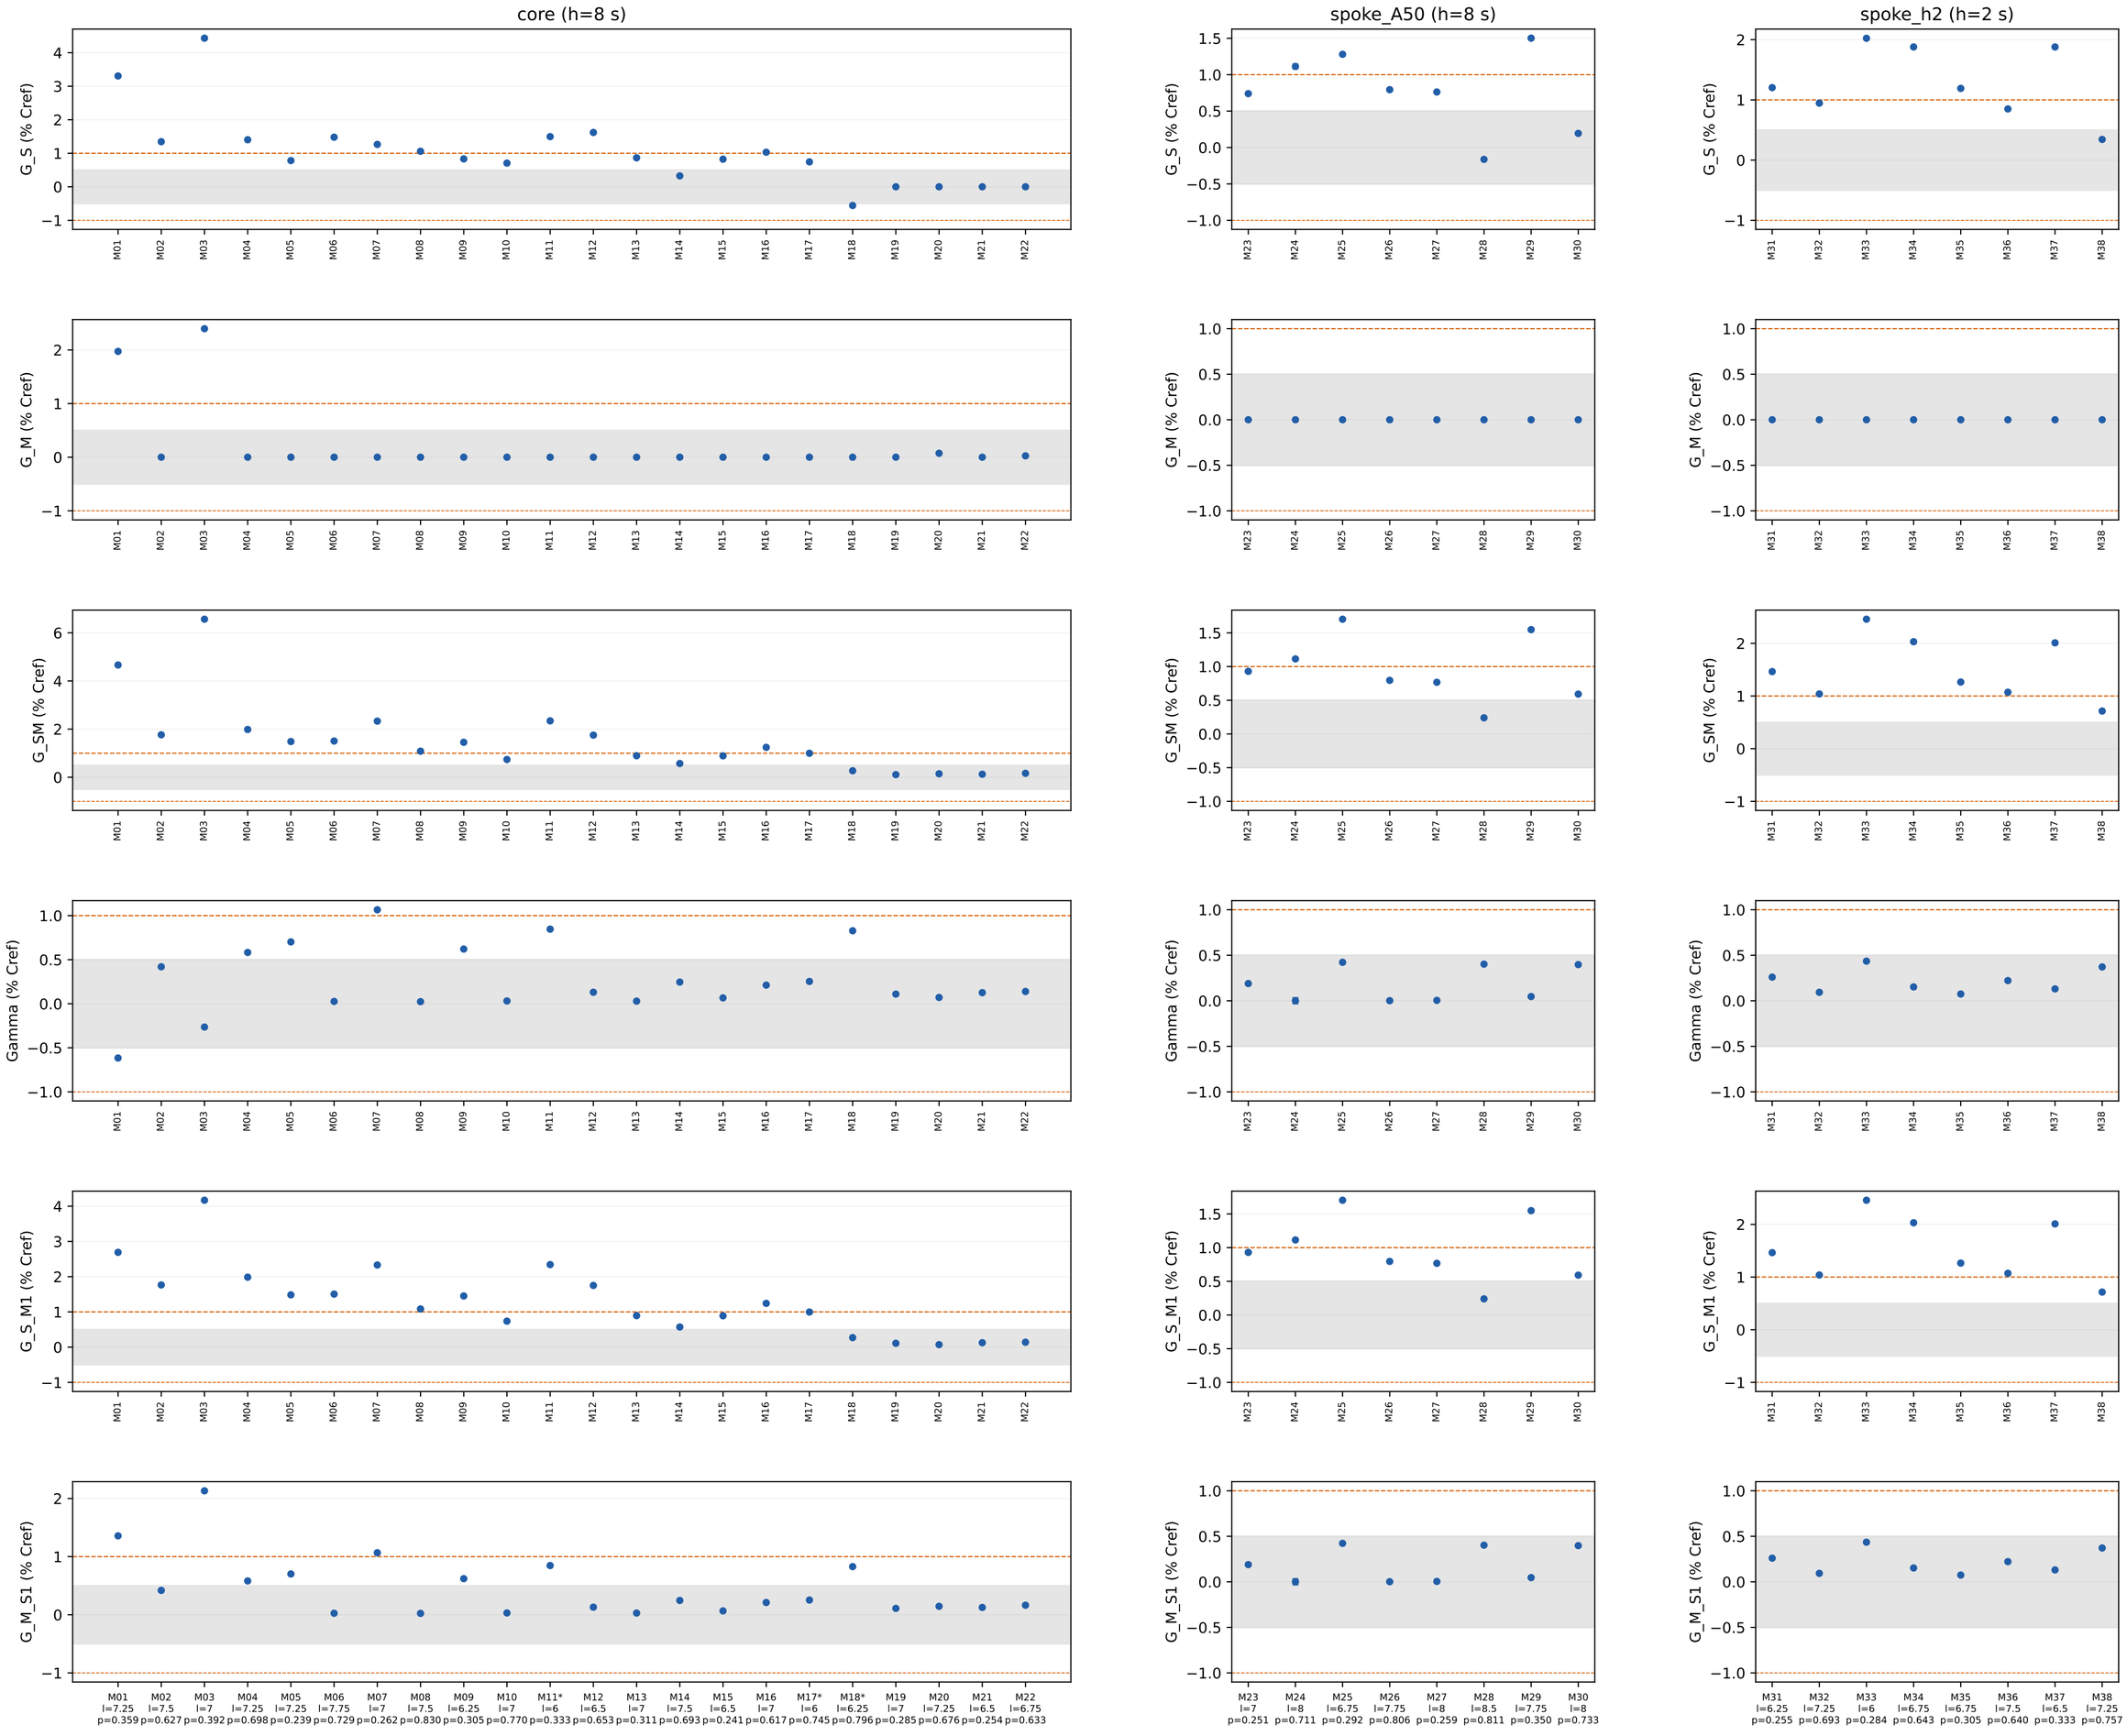
H2: six contrasts | gray band +/-0.5%; dashed +/-1% | l=lambdaA, p=p_sw; *=floor, !=HOLD/dt flag



Selected near-boundary cells, not network frequencies; psi in [-0.20, +0.05]. lambdaA differs across slices; h=2 s only at kappa=0.3.
D-specific finite-window costs, not long-run loss. Points are not connected. Error bars: numeric enclosure, not CI; DK1=candidate for main cells.
